Method Development & Research						
Technology & Data Sharing						
Communication						
Legal Changes						

# Panel Questions

1. What factors should be used to assess the current state and future growth of the patient preference field?
2. What are necessary components (e.g. core competencies and tools) for the education/training of all stakeholders to overcome barriers and build capacity in this field?
3. What resources (human, capital and infrastructure) exist and could be developed to:
  - a. facilitate the conduct of these studies,
  - b. increase patient participation and decrease patient burden, and
  - c. improve the understanding and use of patient preference information?
4. What mechanisms need to be put into place or developed to streamline access to and utilization of patient preference information data sources?

# Question #1

What factors should be used to assess the current state and future growth of the patient preference field?

## Question #2

What are necessary components (e.g. core competencies and tools) for the education/training of all stakeholders to overcome barriers and build capacity in this field?

## Question #3

What resources (human, capital and infrastructure) exist and could be developed to:

- facilitate the conduct of these studies,
- increase patient participation and decrease patient burden, and
- improve the understanding and use of patient preference information?

## Question #4

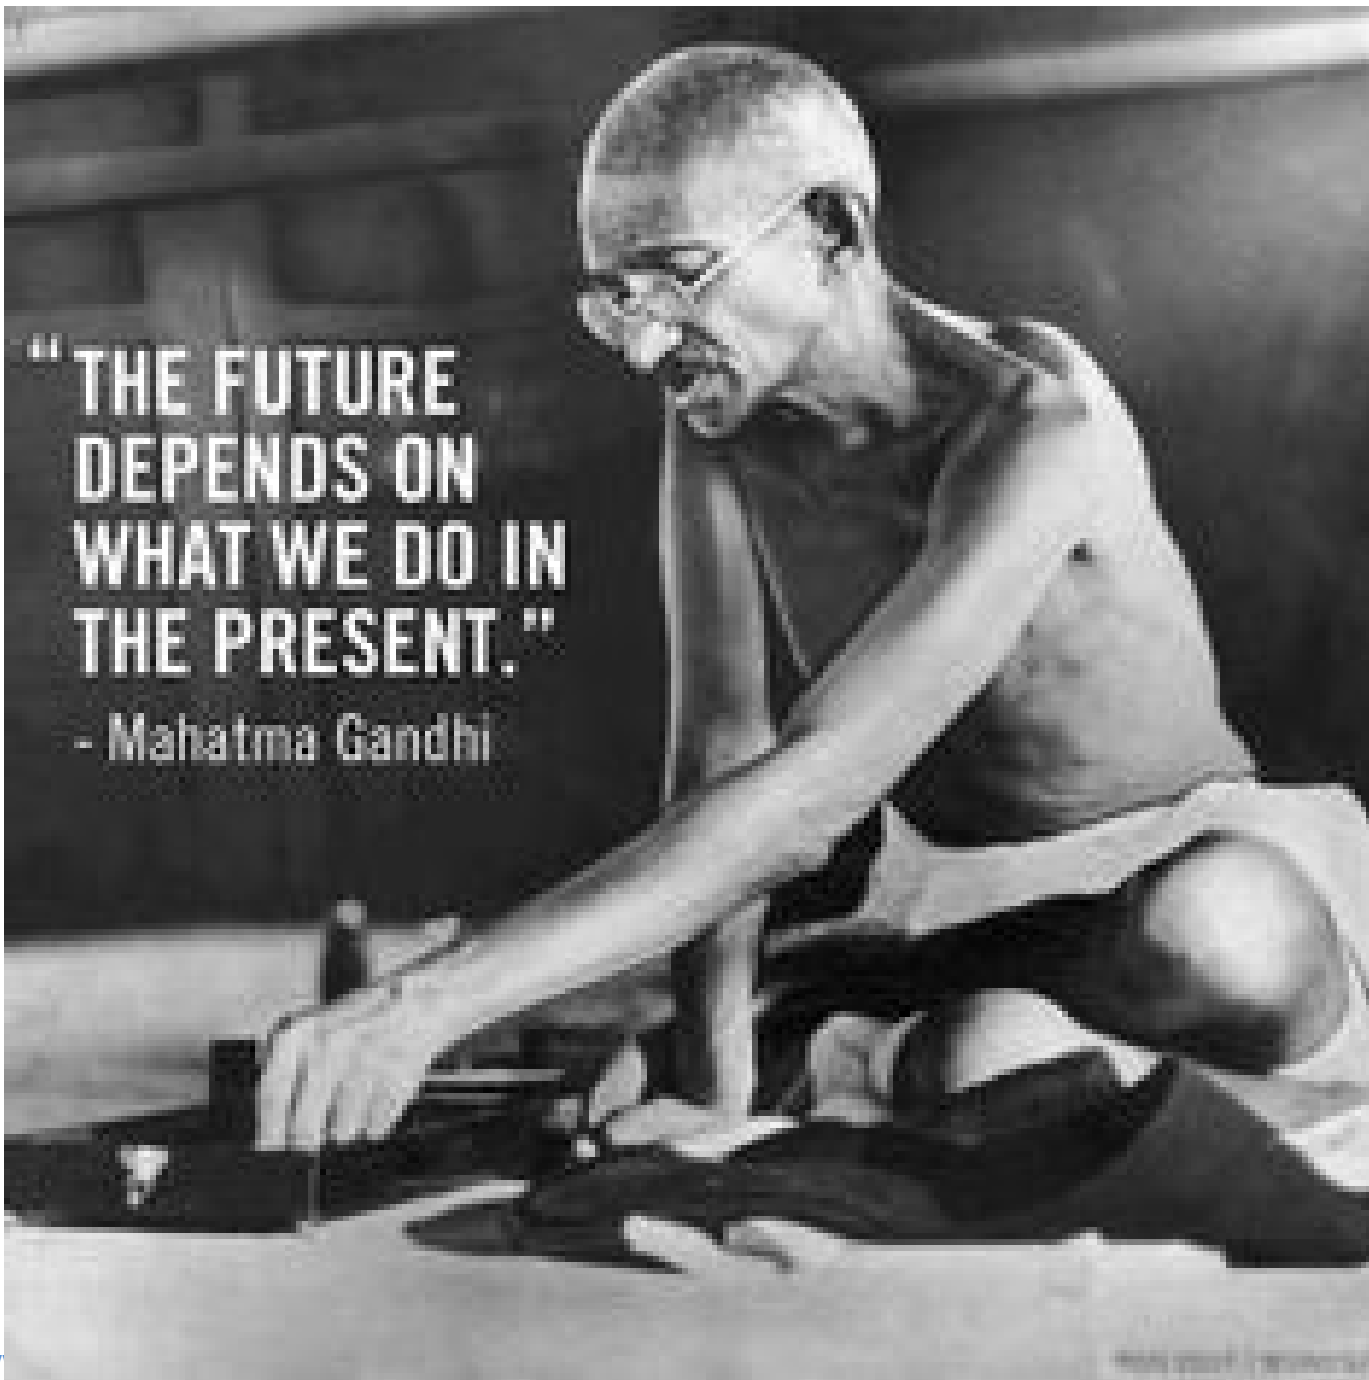

What mechanisms need to be put into place or developed to streamline access to and utilization of patient preference information data sources?
